B12 | 从翻转概率读出可观测的自旋分布

$\langle S^x_{m,n}\rangle = \frac{1}{2} - P_{m,n}$，$\langle S^y\rangle = \langle S^z\rangle = 0$。

单磁子态的总纵向自旋亏损 $\sum_{m,n}(1/2 - \langle S^x_{m,n}\rangle) = 1$。
